

SWIVEL TESTING

SWIVEL TESTING AT TALLMAN EQUIPMENT

Tallman Equipment's Swivel Tester was purpose-built to catch failures before they become costly problems.

Our tester replicates the rotational forces swivels face during line stringing, exposing weaknesses under real-world stress without the real-world consequences.

Every tested swivel receives a unique ID number, giving you full traceability through our secure, mobile-accessible platform.

The result: safer operations, less downtime, and confidence your swivels won't fail when it counts.

WHAT TO KNOW:

- Testing fee is \$195 per swivel
- Missing pins will be replaced and billed accordingly
- Swivels will be engraved with a unique serial number
- Swivels must be identifiable to be tested
- Swivels will be tested to the 3:1 rating of the swivel
- Max Testing Capacity – 30,000 lbs
- Failed swivels will be tagged and returned to the customer
